

Canopy Configuration Tips

Overview

This document will provide tips and tricks that coincide with the Canopy resources that are available to you. This information is provided as a means to help you quickly and efficiently configure Canopy to use within your firm. It is based on what we learned implementing Canopy within Dillon Business Advisors.

Canopy resources

Access the Canopy Academy Training Resources:

Areas of use + tips/tricks

This section provides additional information regarding specific areas, please refer to the Canopy training for details on all areas.

Settings

Click your profile image and go to Settings.

Team Organization

Users

Add your team members – communicate to them that they'll receive an email invite but not to do anything in Canopy yet since you are just getting it set up.

Roles

Add your roles (ie. Client Service Manager, Controller, CFO) - these will be used to assign to Task templates and then defined at the client level for the specific team member.

Billing Settings

Service Items

Add your Engagements (from Practice CS) or Services (from Onvio). These will be used in time entry and for reporting purposes.

User Rates

If you have varied rates for team members, add them. You can give the team member a single rate or define a rate per service item.

Custom Fields

Add Client ID to both Individuals and Businesses.

Tags

Add tags for the various products that your firm sells so you can track which clients are utilizing which products. These can be added at any time.

Clients

Once your clients are added you'll need to clean up the clients.

- Follow the Canopy instructions to link records
- Add team members to clients in their appropriate roles

Folder Structure

Navigate to Templates > Folders and add a template for each folder like what you used in your prior system.

Examples:

- Accounting
 - 2023
 - 2024
 - 2025
- Payroll
 - 2023
 - 2024
 - 2025
- Tax
 - 2023

- 2024
- 2025

Task Templates

First, Canopy's terminology is slightly different than what you are use to.

- Tasks = Projects (due date)
- Subtasks = Tasks (workflow steps)

Before you configure your tasks, set up your automation emails.

- Go to Templates > Emails and create the email templates you'd like to send for automation purposes.

Examples:

- An email to let the client know their documents have been received by the firm
- An email to let the client know their return is waiting to be reviewed
- An email to let the client know their return has been filed with the taxing agencies

Then set your custom statuses. You must first add a task to a client to then add custom status options.

1. Go to Templates >Tasks
2. Click the icon to the far right on a Canopy Task, choose duplicate and click Copy
3. Go to Clients > Client List
4. Choose a client
5. Click on Tasks
6. Click Create task
7. Click Template
8. Choose Template and click Appy
9. Click Create and Manage
10. Click any status field and add the custom statuses

Now you are ready to create your firm's task templates.

Task Name

Utilize the dynamic placeholders in the Task name field – this will be super important for time entry selection.

Dates

Create the following date options:

Dates

	Due date April 15, 2024
	Received date 0 day(s) after 1040 - {{duedateprioryear}} is set to Ready
	Extended Due Date 6 month(s) after Due date of 1040 - {{duedateprioryear}}
	Start date 0 day(s) after Info In/Scan is set to Completed

- Due date – hard code for due date of project
- Received date – this will be the day it came in and got logged into the system
- Extended due date – set to # of months after due date
- Start date – this will be the day it was started – meaning docs were saved/uploaded to appropriate internal location

Automation

These will allow you to change status and send emails to clients.

This screenshot displays that as each subtask is completed the main task status will update for quick viewing. The completed date will also be logged when the task is completed which will be helpful with reporting.

Automation

Add an automation

-  When **Info In/Scan's** status is **Completed** then **set status to In progress.** 
-  When **Preparation's** status is **Completed** then **set status to Needs review.** 
-  When **Tech Review's** status is **Completed** then **set status to With client.** 
-  When **E-File Administration's** status is **Completed** then **set status to Billing.** 
-  When the **task has a status of Completed** then **record Completed date** as the date it was triggered. 

Subtasks

Create each subtask. It is recommended to delete all of the pre-defined subtasks, create your first one, and then duplicate for each additional subtask inside that task. Use the following screenshots for assistance.

Task List

You have the ability to customize tabs within the Tasks list to manage all work. These customized tabs are unique to you. Start filtering and then save your filter.

Client List

You can filter your client list to create various tabs for easy viewing. These customized filters can be shared with others in your firm. While on the filtered tab click the 3 vertical bars then the 3 dots to share the list.
